

1. Create a new android project called "IntentsProj".
2. Create two Empty Activities called "FirstActivity.java" and "SecondActivity.java".
3. Sample interfaces are as follow:

FirstActivity**SecondActivity**

4. Implement the button click event of Ok button to navigate to the SecondActivity.
5. Now modify the button click event of Ok button to take the input numbers from text fields and send them to the SecondActivity as Extras.
6. Implement the SecondActivity to take the extras from onCreate() and display the calculated value in a TextView according to the selected operator's button click event.
